

About this site

This site provides Genotype, Phenotype, and Variety Information for rice (*Oryza sativa* L.). SNP genotyping data (called against [Nipponbare reference Os-Nipponbare-Reference-IRGSP-1.0](#)) came from [3,000 Rice Genomes Project](#). Phenotype and passport data for the 3,000 rice varieties came from the International Rice Genebank Collection Information System ([IRGCIS](#)). We are a part of an ongoing effort by the International Rice Informatics Consortium ([IRIC](#)) to centralize information access to rice research data and provide computational tools to facilitate rice improvement via discovery of new gene-trait associations and accelerated breeding.
